MKC

MBA 2020-21

Course Code & Course Name : 19MBA03 MANAGERIAL ECONOMICS

Year/Sem/Sec : I/I/-

S.No.	Term	Notation (Symbol)	Concept / Definition / Meaning / Units / Equation / Expression	Units
		Unit-I : II	NTRODUCTION	
1.	Economics		The branch of knowledge concerned with the production, consumption, and transfer of wealth.	I
2.	Micro Economics		The branch of economics that studies the behaviour of individuals and firms in making decisions regarding the allocation of scarce resources	I
3.	Macro Economics		It is a branch of economics dealing with the performance, structure, behavior, and decision-making of an economy as a whole.	I
4.	Demand 5.53	IGVINO	It is the quantity of a good that consumers are willing and able to purchase at various prices during a given period of time.	I
5.	Supply	Esta.	The total amount of a product (good or service) available for purchase at any specified price.	I
6.	Elasticity		It is the measurement of the proportional change of an economic variable in response to a change in another.	I
7.	Demand Forecasting		It provides an estimate of the amount of goods and services that its customers will purchase in the future.	I

8.	Delphi Method	It is a forecasting process framework based on the results of multiple rou of questionnaires sent to a panel of experts	unds
9.	Survey Method	It is the technique of gathering data asking questions to people who are thought to have desired information	e I
10.	Statistical Method	It comprises the rules and procedure for collecting, describing, analysin and interpreting quantitative and qualitative data	
11.	Scope of Economics	 Demand Analysis and Forecasting. Cost and Production Analy Pricing Decisions, Policies Practices. Profit Management. 	
12.	Types of economics	 Liberal Managerialism Normative Managerialism Radical Managerialism Art and Science Micro Economics Uses Macro Economics Multi-disciplinary Prescriptive / Normative Discipline 	I
13.	Significance of economics	1.Business Planning 2.Cost Control 3.Determination 4.Business Prediction 5.Profit Planning And Control	I
14.	Nature of economics	1.Art and Science 2.Management oriented 3.Multi-disciplinary 4.Close to Micro Economics 5.Uses Macro Economics	I

15.	Role of responsibility of managerial economics	 Role of Business Economics Social Responsibility of Business Analyses operations of business Demand forecasting and estimation Production planning Maintaining better relations 	I
16.	Law of demand	The law of demand states that the quantity demanded of a good shows an inverse relationship with the price of a good when other factors are held constant	I
17.	Factors determining demand	 Tastes and Preferences of the Consumers Income of the People Changes in Prices of the Related Goods Advertisement Expenditure 	I
18.	Elasticity of demand	Elasticity of Demand, on the other hand, specifically measures the effect of change in an economic variable on the quantity demanded of a product.	I
19.	Price elasticity of 5 5 1 6 VIIV (demand	Price elasticity of demand (PED) shows the relationship between price and quantity demanded and provides a precise calculation of the effect of a change in price on quantity demanded.	I
20.	Income elasticity of demand	Income elasticity of demand measures the relationship between the consumer's income and the demand for a certain good. It may be positive or negative, or even non-responsive for a certain product	I
21.	Cross elasticity of demand	Cross elasticity of demand refers to an economic concept that usually measures the responsiveness in the demanded quantity of one good when	I

		the price of another product changes.	
		It is a technique for estimation of probable demand for a product or services in the future. It is based on the	
22.	Demand forecasting	analysis of past demand for that product or service in the present market condition	I
		1.Seasonality	
23.	Factors affecting	2.Competition	I
23.	demand forecasting	3. Geography	
		4. Types of Goods	
	>	The law of supply is a basic principle in economics that asserts that,	
		assuming all else being constant, an	_
24.	Law of supply	increase in the price of goods will result in a corresponding direct	I
		increase in the supply thereof.	
		0:0:4	
		Price of the given Commodity Prices of Other Goods:	
25.	Factors determining supply	Prices of Factors of Production	I
23.		NO YOUR FUTURE	
	Unit	t-II : COST ANALYSIS	
26.	Private Cost	Costs that are incurred by the individuals and firms who are directly involved in some economic activity.	II
27.	The Explicit cost	The cost actually incurred by the firm for making all the physical payments and the contractual obligations	II
28.	Short Run	It expresses the idea that an economy behaves differently depending on the length of time it has to react to certain stimuli.	II

29.	Long Run	The long run is a period of time in which all factors of production and costs are variable.	II
30.	Marginal cost	It is the change in the total cost that arises when the quantity produced is incremented by one unit	II
31.	Economies of scale	The cost advantages that enterprises obtain due to their scale of operation with cost per unit of output decreasing with increasing scale.	II
32.	Diseconomies of scale	They are the features that lead to an increase in average costs as a business grows beyond a certain size.	II
33.	Internal Economics	They are those economies in production which occur to the firm itself when it expands its output.	II
34.	External Economics	It occurs outside of an individual company but within the same industry.	II
35.	Small scale production	Small scale units buy raw materials and other components in small quantities.	II
36.	Private Cost	Costs that are incurred by the individuals and firms who are directly involved in some economic activity.	П
37.	The Explicit cost	The cost actually incurred by the firm for making all the physical payments and the contractual obligations	II
38.	Short Run	It expresses the idea that an economy behaves differently depending on the length of time it has to react to certain stimuli.	П
39.	Long Run	The long run is a period of time in which all factors of production and costs are variable.	II
40.	Marginal cost	It is the change in the total cost that arises when the quantity produced is incremented by one unit	II
41.	Economies of scale	The cost advantages that enterprises obtain due to their scale of operation	II

		with cost per unit of output decreasing	
		with increasing scale.	
		They are the features that lead to an	
40	Diseconomies of scale	increase in average costs as a business	II
42.		grows beyond a certain size.	
	Internal Economics	They are those economies in	II
43.	internal Economics	production which occur to the firm itself when it expands its output.	11
		itself when it expands its output.	
4.4	External Economics	It occurs outside of an individual	II
44.		company but within the same industry.	
		Small scale units buy raw materials	
45.	Small scale production	and other components in small	II
		quantities.	
	-	It refers to the amount of payment	
46.	Cost	made to acquire any goods and	II
10.		services.	
		The cost function measures the	
		minimum cost of producing a given	
47.	Cost function	level of output for some fixed factor	II
		prices.	
		Administrative or Managerial	
		Economies.	
		Technical Economies.	
40	Types of internal	Marketing Economies or Commercial Economies.	II
48.	economics	Indivisibility.	
	5.50.51	Financial Economies.	
	0.53161	VINC MORE SUITURE	
	Ee	Diseconomies of scale happen when a	
40	Diseconomics of large	company or business grows so large	II
49.	scale production	that the costs per unit increase.	
		Small scale production is production	
		Small scale production is production with small capital outlay and therefore	
		at a low level of output. On the other	
50.	Small and large scale	hand large scale production is	II
50.	production	production with a large scale outlay	
		and therefore results in high level of	
		output.	
	Unit-	III : MARKET STRUCTURE	
	Market Structure	Describes the nature of competition	III
51.		and the pricing policy followed in the	***
	,		

		market.	
52.	Perfect Competition	It describes a market structure where competition is at its greatest possible level(Large no of buyer & seller).	III
53.	Imperfect Competition	It exists in a competitive market, but where some of its features or sectors are not truly completely competitive.	III
54.	Monopoly	A market structure characterized by a single seller, selling a unique product in the market.	III
55.	Duopoly	It is a situation where two companies own all, or nearly all, of the market for a given product or service.	III
56.	Firm	It is a commercial enterprise, a company that buys and sells products and/or services to consumers with the aim of making a profit.	III
57.	Price discrimination	It is a selling strategy that charges customers different prices for the same product or service based on what the seller thinks	III
58.	Oligopoly	It is a market structure with a small number of firms	III
59.	Equilibrium S.5.51.6 VINO	It is a situation in which economic forces such as supply and demand are balanced.	III
60.	Monopolistic Competition	Many producers sell products that are differentiated from one another.	III
61.	Market Structure	Describes the nature of competition and the pricing policy followed in the market.	III
62.	Perfect Competition	It describes a market structure where competition is at its greatest possible level(Large no of buyer & seller).	III
63.	Imperfect Competition	It exists in a competitive market, but where some of its features or sectors are not truly completely competitive.	III
64.	Monopoly	A market structure characterized by a single seller, selling a unique product	III

		in the market.	
65.	Duopoly	It is a situation where two companies own all, or nearly all, of the market for a given product or service.	III
66.	Firm	It is a commercial enterprise, a company that buys and sells products and/or services to consumers with the aim of making a profit.	III
67.	Price discrimination	It is a selling strategy that charges customers different prices for the same product or service based on what the seller thinks	III
68.	Oligopoly	It is a market structure with a small number of firms	III
69.	Equilibrium	It is a situation in which economic forces such as supply and demand are balanced.	III
70.	Pricing	Pricing is the process whereby a business sets the price at which it will sell its products and services.	III
71.	Characteristics of market structure	Market structure refers to structural variables such as number of firms, barriers to entry and exit, product differentiation, etc.	III
72.	Comparison of different market conditions E510	There are four basic types of market structures: perfect competition, imperfect competition, oligopoly, and monopoly.	III
73.	Examples of market conditions	cost of living, demographics, supply and demand, mortgage rates	III
74.	Market dynamics	Market dynamics are forces that will impact prices and the behaviors of producers and consumers.	III
75.	Local market conditions	Local market conditions means certain relevant and material conditions, criteria, data, and facts, beyond the control or influence of a new motor vehicle dealer	III

	Unit-IV : CON	SUMER BEHAVIOUR	
76.	Consumption	The use of goods and services by households	IV
77.	Human- Wants	All the desires and aspirations and motives of humans are known as human wants in economics.	IV
78.	Utility	It refers to the total satisfaction received from consuming a good or service.	IV
79.	Marginal Utility	It determines how much of an item consumers are willing to purchase	IV
80.	Necessaries	They are those goods of consumption without which a man cannot live or exist.	IV
81.	Comforts	The goods which make our lives comfortable.	IV
82.	Luxuries	It is an Expensive thing which used to display one's wealth & power.	IV
83.	Total Utility	Total benefit obtained by person from consuming goods and services.	IV
84.	Form Utility	Utility created by changing form (or)shape of the materials.	IV
85.	Place Utility 5.5516 VINC	It refers to the utility created for the product by the virtue of its location.	IV
86.	Consumption E510	The use of goods and services by households	IV
87.	Human- Wants	All the desires and aspirations and motives of humans are known as human wants in economics.	IV
88.	Utility	It refers to the total satisfaction received from consuming a good or service.	IV
89.	Marginal Utility	It determines how much of an item consumers are willing to purchase	IV
90.	Law of diminishing	The law of diminishing marginal utility states that all else equal, as	IV

	marginal utility	consumption increases, the marginal utility derived from each additional unit declines.	
91.	Price	The amount of money that has to be paid to acquire a given product.	IV
92.	Law of Equi marginal utility	The law states that a consumer should spend his limited income on different commodities in such a way that the last rupee spent on each commodity yield him equal marginal utility in order to get maximum satisfaction.	IV
93.	Importance of law of equi-marginal utility	When a product is scarce, the law of substitution comes to our assistance. Concept has an important influence on price determination.	IV
94.	Characteristics of human wants	 Human wants are unlimited A particular want is satiable Wants are recurring Wants are complementary 	IV
95.	Time utility	When a farmer stores his wheat after harvesting for a few months and sells it when its price rises, he has created time utility and added to the value of wheat.	IV
96.	Service Utility	When doctors, teachers, lawyers, engineers, etc. satisfy human wants through their services, they create service utility.	IV
97.	Possession Utility	Utility is also added by changing the possession of a commodity. A book on economic theory has little utility for a layman.	IV
98.	Knowledge Utility	When the utility of a commodity increases with the increase in knowledge about its use, it is the creation of knowledge utility through propaganda, advertisement, etc.	IV
99.	Natural Utility	All free goods such as water, air, sunshine, etc., possess natural utility. They have the capacity to satisfy our	IV

		wants.	
100.	Characterisitics of utility	 Utility and Usefulness Utility and Satisfaction Utility and Pleasure Utility is Subjective Utility is Relative Utility is Abstract 	IV
		Unit-V : NATIONAL INCOME	
101.	National Income/ Dividend	It means the value of goods and services produced by a country during a financial year	V
102.	GNP[Gross National Product]	GNP is the value of all finished goods and services produced in a country in one year by its nationals.	V
103.	NNP[Net National Product]	NNP is a measure of how much a country can consume in a given period.	V
104.	Product/ Value added method	It measures the contribution of each producing unit in the domestic economy avoiding any possibility of double counting	V
105.	Income method	It measures national income from the side of payments made to the primary factors of production in the form of rent, wages, interest and profit for their productive services in an accounting year.	V
106.	Expenditure Method	Measures as a flow of expenditure and sum of total private consumption expenditure.	V
107.	Foreign investment	When a company or individual from one nation invests in assets or ownership stakes of a company based in another nation.	V
108.	Accumulated Depreciation	It is the total amount of a plant asset's cost that has been allocated to depreciation expense since the asset was put into service.	V
109.	Declining balance	It is an accelerated depreciation method that records larger	V

	method		depreciation expenses during the earlier years of an asset's useful life, and smaller ones in later years.	
110.	Net investment		It is the amount spent by a company or an economy on capital assets, or gross investment, less depreciation.	V
111.	National Income/ Dividend		It means the value of goods and services produced by a country during a financial year	V
112.	GNP[Gross National Product]		GNP is the value of all finished goods and services produced in a country in one year by its nationals.	V
113.	NNP[Net National Product]		NNP is a measure of how much a country can consume in a given period.	V
114.	Product/ Value added method	X	It measures the contribution of each producing unit in the domestic economy avoiding any possibility of double counting	V
115.	Income method		It measures national income from the side of payments made to the primary factors of production in the form of rent, wages, interest and profit for their productive services in an accounting year.	V
116.	Expenditure Method	Estd.	Measures as a flow of expenditure and sum of total private consumption expenditure.	V
117.	Foreign investment		When a company or individual from one nation invests in assets or ownership stakes of a company based in another nation.	V
118.	Accumulated Depreciation		It is the total amount of a plant asset's cost that has been allocated to depreciation expense since the asset was put into service.	V
119.	Declining balance method		It is an accelerated depreciation method that records larger depreciation expenses during the	V

		earlier years of an asset's useful life, and smaller ones in later years.	
120.	Net investment	It is the amount spent by a company or an economy on capital assets, or gross investment, less depreciation.	V
121.	National Income/ Dividend	It means the value of goods and services produced by a country during a financial year	V
122.	GNP[Gross National Product]	GNP is the value of all finished goods and services produced in a country in one year by its nationals.	V
123.	NNP[Net National Product]	NNP is a measure of how much a country can consume in a given period.	V
124.	Product/ Value added method	It measures the contribution of each producing unit in the domestic economy avoiding any possibility of double counting	V
125.	Income method	It measures national income from the side of payments made to the primary factors of production in the form of rent, wages, interest and profit for their productive services in an accounting year.	V
		General Questions	
126.	What Is Managerial Economics?	Economics is a social science, which studies human behavior in relation to optimizing allocation of available resources to achieve the given ends.	
127.	What do you mean by Capital Expenditure?	All expenditure which results in the acquisition of fixed assets and other development projects, the benefits of which are expected to be received beyond one year in the future is capital expenditure.	
128.	What are the types of Capital Expenditure?	Profit earning projects, Replacement Projects, Expansion Projects, Non- profit projects	
129.	How Classes of Companies are Classified?	Chartered company, Statutory company, Registered company, Companies with unlimited liability,	

130.	What are the Privileges of a Private Company?		Companies with liability limited by guarantee, Companies with liability limited by shares, Private Company, Public Company, Because of advantages of limited liability, privacy in business and simplicity in formation many people prefer to start private companies rather than public companies.	
131.	What are the types of Partnership Organization?		General Partnership, Limited Partnership	
132.	How public undertaking has progressed in India?		By passing the Industrial Policy Resolutions of 1948 and 1956 and Industries Act of 1951, the State's sphere in the industrial field increased significantly.	
133.	What are the advantages and disadvantages of Net Present Value Method (NPV)?		It recognizes time value of money and considers cash flows over a period of several years. It is based on cash inflows rather than accounting profit; it helps in better analyses of wealth of the shareholders.	
134.	How is Journal Classified?	16 VING	General, Special	
135.	What are the benefits and limitations of Internal Rate of Return (IRR) Method?	Estd.	It takes into account time value of money and is based on cash flows and not accounting profits. It aims at maximizing profits, hence helps in selecting that proposal which is expected to earn more than the minimum rate of return.	
136.	What are the types of Financial Analysis?		 External Analysis Internal Analysis Horizontal Analysis Vertical Analysis Ratio Analysis 	
137.	What are the merits		It is simple to understand and easy to	

	1.1		compute. It is cost effective as	
	and demerits of		compared to other methods. It ignores	
	Payback Period?		cash inflows after the payback period,	
			which may result in incorrect selection	
			of project and does not consider the	
			life time of the asset.	
			The time of the asset.	
			It is very simple and easy to operate.	
	What are the merits and demerits of Rate of		It takes the entire earnings of the	
			project in calculating rate of return,	
100			hence gives better view of profitability	
138.	Return Method (ARR)		unlike PBP.	
	Method?		It ignores the period in which the	
			profits are earned.	
		-	Perfect opposition is basically an	
		The same of	monetary model that enables to	
			explain a hypothetical marketplace	
100	What Does Perfect	2	form. In this shape the producer or the	
139.	Competition Mean?	7.63	customer does have any type of	
		7.4	marketplace authority for you to make	
			modifications in charges.	
	What Is A Demand Forecast?		A call for forecast is the prediction of	
			what is going to manifest in your	
1.10			enterprise's existing product sales. It	
140.			would be great to determine the call	
		70	for forecast the usage of a multi-useful	
		74	method.	
	What Is Equilibrium	DOMESTICAL	Firm is an company that buys and	
141.	Of The Firm And Industry ?	CO VITAL	hires assets and sells goods and	
141.		Fetd	services	
		LJ [U]	Critical managerial decision making is	
	D 11 D		the key to superior performance at	
	Explain Factors		work. One has to consult crucial Data,	
142.	Influencing Managerial		beyond data and overall performance	
	Decision ?		metrics and evaluation earlier than	
			making decisions.	
	How Will You Arrive		Managerial Decisions/ Decision	
143.	At A Business		Analysis is the Process of selecting the	
	Decision?		satisfactory out of alternative	
			possibilities, open to the firm.	
	What Are Firms?		Firm is an enterprise owned with the	
144.	what Are Firms!		aid of one or collectively by way of a	
			few or many human beings, engaged	

		in a productive pastime, with a particular aim.
145.	What Are The Factors Of Production?	Land.LaborCapital.
146.	What Are The Main Techniques Of Demand Estimation?	Survey Method Statistical Method.
147.	What Is The Significance Of Foreign Exchange Rate Risk	Foreign alternate risk is also known as hedging. Those individuals who are threat averse follow this sort of transaction to store company from sudden loses.
148.	What Is Pricing Of Factors Of Production?	Whenever we've touched at the pricing of productive elements, we have signified the expenses of their unit offerings, i.E., their rents.
149.	What Are The Types Of Market Economies?	Free Market, Mixed Market, Command and Traditional Economy.
150.	Why Does An Indifference Curve Never Meet?	No indifference curve can intersect because all factors on indifference curve are ranked similarly favored and ranked either or less extra preferred than every different factor at the curve.
