## Mathematics

## Must Know Concepts (MKC)

| Course Code \& Course Name |  |  | 21CAA01 / Mathematical Foundations of Computer Science |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Year/Sem/ |  | I/I/- |  |
| S.No | Term | Notation <br> (Symbol) | Concept / Definition / Meaning / Units / Equation / Expression | Units |
| Unit - I Logic And Proofs |  |  |  |  |
| 1 | Proposition |  | It is a declarative sentence which is either true or false but not both. | I |
| 2 | Statement <br> Formula |  | It is an expression which is a string consisting of variables (Captial letters with or with out subscripts), parenthesis and connectives symbols. | I |
| 3 | Logical Connectives | $, \vee, \wedge, \rightarrow, \leftrightarrow$ | Negation, Conjunction, Disjunction, Conditional, Bi Conditional. | I |
| 4 | Truth Table <br> Negation Conjunction (And) |  | A truth table is a table consists of the truth values (True or False) | I |
|  |  |  | The negation of a statement is generally formed by introducing the word "not" at a proper place in the given statement. | I |
|  |  | $\wedge$ | If both $P$ and $Q$ have the truth values $T$, then $P \wedge Q$ has the truth value $T$. Otherwise $\mathrm{P}^{\wedge} \mathrm{Q}$ has the truth value F . | I |
| 5 | Disjunction (OR) | V | $\mathrm{P} \vee \mathrm{Q}$ has the truth value T if any one of P or Q has the truth value T | I |
| 6 | Biconditional | $\leftrightarrow$ | The Statement $\mathrm{P} \leftrightarrow Q$ has the truth value T whenever both $P$ and Q have same truth values. | I |
| 7 | Tautology |  | A Statement formula which is always true is called a Tautology. | I |
| 8 | Contradiction |  | A Statement formula which is always true is called a Contradiction. | I |
| 9 | Contingency |  | A Statement formula which is neither tautology nor contradiction is called Contingency. | I |

| 10 | Converse, Inverse and Contrapositive |  | $\mathrm{P} \rightarrow \mathrm{Q}$ is a conditional statement Converse of $\mathrm{P} \rightarrow \mathrm{Q}$ is $\mathrm{Q} \rightarrow \mathrm{P}$ Contra positive of $\mathrm{P} \rightarrow \mathrm{Q}$ is $\sim \mathrm{Q} \rightarrow \sim \mathrm{P}$ Inverse of $P \rightarrow \mathrm{Q}$ is $\sim \mathrm{P} \rightarrow \sim \mathrm{Q}$. | I |
| :---: | :---: | :---: | :---: | :---: |
| 11 | Idempotent Laws |  | $\begin{aligned} & \text { 1. } \mathrm{P} \wedge \mathrm{P} \leftrightarrow \mathrm{P} \\ & \text { 2. } \mathrm{P} \vee \mathrm{P} \leftrightarrow \mathrm{P} \end{aligned}$ | I |
| 12 | Identity Laws |  | $\begin{aligned} & \text { 1. } \mathrm{P} \wedge \mathrm{~T} \leftrightarrow \mathrm{P} \\ & \text { 2. } \mathrm{P} \vee \mathrm{~F} \leftrightarrow \mathrm{P} \end{aligned}$ | I |
| 13 | De Morgans Laws |  | $\begin{aligned} & \text { 1. } \sim(\mathrm{p} \wedge \mathrm{q}) \leftrightarrow(\sim p \vee \sim q) \\ & \text { 2. } \sim(p \vee \mathrm{q}) \leftrightarrow(\sim p \wedge \sim q) \end{aligned}$ | I |
| 14 | Double Negation Law |  | $\sim(\sim p) \leftrightarrow p$ | I |
| 15 | Proposition |  | It's a declarative sentence which is either true or false but not both. | I |
| 16 | Statement <br> Formula |  | It is an expression which is a string consisting of variables (Capital letters with or without subscripts), parenthesis and connectives symbols. | I |
| 17 | Quantifiers |  | It is one which is used to quantify the nature of variables. | I |
| 18 | Types of Quantifiers |  | 1. Universal Quantifier <br> 2. Existential Quantifier | I |
| 19 | Universal Quantifier | $(x)$ or $\forall x$ | The quantifier "for all $x$ " is called the Universal Quantifier. | I |
| 20 | Existential Quantifier | ( $\exists$ ) | The quantifier "some $x$ " is called the Existential Quantifier. | I |
| 21 | Disjunctive Normal Form | DNF | A Statement formula which is equivalent to a given formula and which consists of a sum of elementary products is called a Disjunctive Normal Form. | I |
| 22 | Conjunctive Normal Form | CNF | A Statement formula which is equivalent to a given formula and which consists of a product of elementary Sum is called a Conjunctive Normal Form. | I |
| 23 | Principal <br> Disjunctive <br> Normal Form | PDNF | For a given Statement formula, an equivalent formula consisting of disjunction of min terms only is known as Principal Disjunctive Normal Form. | I |
| 24 | Principal Conjunctive Normal Form | PCNF | For a given Statement formula, an equivalent formula consisting of conjunction of max terms only is known as Principal Disjunctive Normal Form | 1 |

| 25 | Predicate <br> Calculus | Predicate Calculus deals with the study of predicates. |  | I |
| :---: | :---: | :---: | :---: | :---: |
| Unit-II Combinatorics |  |  |  |  |
| 26 | Permutation | $n P_{r}$ | The process of arranging things is called Permutation. | II |
| 27 | Combination | $n C_{r}$ | The process of selecting things is called Combination. | II |
| 28 | Generating function. | $\mathrm{G}(\mathrm{x})=\sum_{n=0}^{\infty} a_{n} x^{n}$ | The generating function of a sequence $\mathrm{a}_{0}, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots \ldots, \mathrm{a}_{\mathrm{n}}$, is the expression $\mathrm{G}(\mathrm{x})=\sum_{n=0}^{\infty} a_{n} x^{n}$ | II |
| 29 | Principle of Inclusion and Exclusion for two variables |  | $\left\|A_{1} \cup A_{2}\right\|=\left\|A_{1}\right\|+\left\|A_{2}\right\|-\left\|A_{1} \cap A_{2}\right\|$ | II |
| 30 | The principle of Inclusion Exclusion for three variables |  | $\begin{aligned} \left\|A_{1} \cup A_{2} \cup A_{3}\right\| & \\ & =\left\|A_{1}\right\|+\left\|A_{2}\right\|+\left\|A_{3}\right\|-\left\|A_{1} \cap A_{2}\right\| \\ & -\left\|A_{1} \cap A_{3}\right\|-\left\|A_{2} \cap A_{3}\right\| \\ & +\left\|A_{1} \cap A_{2} \cap A_{3}\right\| \end{aligned}$ | II |
| 31 | Recurrence relation |  | An equation that expresses $\mathrm{a}_{\mathrm{n}}$ the general term of the sequence $\left(a_{n}\right)$ in terms of one or more of the previous terms of the sequence namely $\mathrm{a}_{0}, \mathrm{a}_{1}, \mathrm{a}_{2}, \ldots \ldots, \mathrm{a}_{\mathrm{n}-1}$ for all integers n with $\mathrm{n} \geq \mathrm{n}_{0}$ where $\mathrm{n}_{0}$ is a non-negative integer is called Recurrence relation. | II |
| 32 | Linear recurrence relation |  | A recurrence relation of the form $c_{0} a_{n}+c_{1} a_{n-1}+c_{2} a_{n-2}+\cdots+c_{k} a_{n-k}=f(n)$ is called a linear recurrence relation of degree k with constant coefficients, where $c_{0}, c_{1}, \ldots c_{k}$ are real numbers and $c_{k} \neq 0$. | II |
| 33 | Homogeneous recurrence relation | $f(n)=0$ | If $f(n)=0$, then the given recurrence relation is called homogeneous recurrence relation. | II |
| 34 | NonHomogeneous recurrence relation | $f(n) \neq 0$ | If $f(n) \neq 0$, then the given recurrence relation is called homogeneous recurrence relation. | II |
| 35 | Characteristic equation of order 2 |  | $c_{0} r^{2}+c_{1} r+c_{2}=0, r \neq 0$ is called the characteristic equation. | II |
| 36 | Recurrence relation for the Fibonacci sequence | $\mathrm{f}_{\mathrm{n}}=\mathrm{f}_{\mathrm{n}-1}+\mathrm{f}_{\mathrm{n}-2}$ | Fibonacci sequence recurrence relation $\mathrm{f}_{\mathrm{n}}=\mathrm{f}_{\mathrm{n}-1}+\mathrm{f}_{\mathrm{n}-2}$ | II |
| 37 | Complementary function of the |  | $a_{n}=k_{1} r^{n}+k_{2} r^{n}$ | II |

|  | recurrence relation, if the roots are real and unequal |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| 38 | Complementary function of the recurrence relation, if the roots are real and equal |  | $a_{n}=\left(k_{1}+k_{2} n\right) r^{n}$ | II |
| 39 | Complementary function of the recurrence relation, if the roots are Imaginary |  | $a_{n}=r^{n}\left(k_{1} \cos n \theta+k_{2} \sin n \theta\right)$ | II |
| 40 | Generating function of the sequence $1,1,1,1 \ldots$ is |  | $\mathrm{G}(\mathrm{x})=\sum_{n=0}^{\infty} x^{n}$ | II |
| 41 | Generating function of the sequence $1,2,3,4 \ldots$ is |  | $\mathrm{G}(\mathrm{x})=\sum_{n=0}^{\infty}(n+1) x^{n}$ | II |
| 42 | Generating function of the sequence $1, a, a^{2}, a^{3} \ldots$. is |  | $G(x)=\frac{1}{1-a x}, \text { for }\|a x\|<1$ | II |
| 43 | Generalisation of the Pigeonhole principle |  | If n pigeons are accommodated in m pigeonholes and $n>m$,then one of the pigeonholes must contain atleast $\left\lfloor\frac{n-1}{m}\right\rfloor$ pigeons | II |
| 44 | Circular permutations | DESIGNI | If the objects are arranges in a circle (or any closed curve), we get circular permutation and the number of circular permutations will be different from the number of linear permutations. | II |
| 45 | Number of different circular permutations of n objects |  | $(n-1)!$ | II |
| 46 | Number of different circular arrangements of n objects |  | $\frac{(n-1)!}{2}$ | II |
| 47 | The principle of Mathematical induction |  | Let $\mathrm{P}(\mathrm{n})$ be a statement or proposition involving the nature number ' $n$ ' <br> (i) If $\mathrm{P}(1)$ is true <br> (ii) Under the assumption that when $\mathrm{P}(\mathrm{k})$ is true, $\mathrm{P}(\mathrm{k}+1)$ is true, then we conclude that a statement $\mathrm{P}(\mathrm{n})$ is true for all natural | II |

|  |  |  | numbers ' n ' |  |
| :---: | :---: | :---: | :---: | :---: |
| 48 | Well-ordering Property |  | Every non empty set of non negative integers has a least element. | II |
| 49 | Pigeonhole principle |  | If ( $n+1$ ) pigeon occupies ' $n$ ' holes then atleast one hole has more than 1 pigeon. | II |
| 50 | Principle of strong induction |  | $P(j)$ is true for $j=1,2 \ldots . . k$ and shows that $P(k+1)$ must also be true based on this assumption. This is called strong induction. | II |
| Unit-III Graphs |  |  |  |  |
| 51 | Graph | $G=G\langle V, E\rangle$ | A graph $G=G\langle V, E\rangle$ consists of a non-empty set V,called the set of vertices (nodes, points) and a set E of ordered or unordered pairs of elements of V called the set of edges, such that there is a mapping from the set $E$ to the set of ordered or unordered pairs of elements of V . | III |
| 52 | Directed graph |  | If in a graph $G=G\langle V, E\rangle$, each edge $e \in E$ is associated with an ordered pair of vertices, then $G$ is called a directed graph or Digraph. | III |
| 53 | Undirected Graph |  | If each edge is associated with an unordered pair of vertices, then G is called an undirected graph. | III |
| 54 | Simple graph |  | A graph in which there is only one edge between a pair of vertices is called a simple graph. | III |
| 55 | Multi Graph |  | A graph which contains some parallel edges is called a multigraph. | III |
| 56 | Pseudo Graph |  | A graph in which loops and parallel edges are allowed is called a pseudo graph. | III |
| 57 | Regular graph |  | Every vertex of a simple graph has the same degree. | III |
| 58 | Complete graph |  | There exists an edge between every pair of vertices. | III |
| 59 | Degree of a Vertex | $\operatorname{deg}(v)$ | The degree of a vertex in an undirected graph is the number of edges incident with it, with the exception that a loop at a vertex contributes twice to the degree of that vertex. | III |
| 60 | Pendant Vertex |  | If the degree of a vertex is one then it is called pendant vertex. | III |
| 61 | Bipartite graph |  | If the vertex set of a simple graph $G=G\langle V, E\rangle$ can be partitioned into two subsets $V_{1}$ and $V_{2}$ such that every edge of $G$ connects a vertex in $V_{1}$ and and a vertex $V_{2}$ , then G is called a bipartite graph. | III |
| 62 | Completely Bipartite graph |  | If each vertex of $V_{1}$ is connected with every vertex of $\mathrm{V}_{2}$ by an edge,then G is called Completely Bipartite graph | III |

| 63 | Adjacency <br> Matrix | $A=\left[a_{i j}\right]$ | $=\left\{\begin{array}{c} 1, \text { if there exist an edge between } v_{i} \text { and } v_{j} \\ 0, \\ \text { otherwise } \end{array}\right.$ | III |
| :---: | :---: | :---: | :---: | :---: |
|  | Incidence <br> Matrices | $B=\left[b_{i j}\right]$ | $=\left\{\begin{array}{l} 1, \text { when edge } e_{j} \text { incident on } v_{i} \\ 0, \\ \text { otherwise } \end{array}\right.$ | III |
| 64 | Path Matrix | $P=\left[p_{i j}\right]$ | $=\left\{\begin{array}{l} 1, \text { if there exist a path from } v_{i} \text { to } v_{j} \\ 0, \end{array} \quad\right. \text { otherwise }$ | III |
| 65 | Graph Isomorphism |  | If $G_{1} \& G_{2}$ are isomorphic then $G_{1} \& G_{2}$ have <br> (i)the same number of vertices <br> (ii)the same number of edges <br> (iii) an equal number of vertices with a given degree | III |
| 66 | Path |  | Starting with the vertex $v_{1}$, one can travel along edges $\left(v_{1}, v_{2}\right),\left(v_{2}, v_{3}\right), \ldots$. and reach the vertex $v_{k}$. | III |
| 67 | Length of the path |  | the number of edges appearing in the sequence of a path. | III |
| 68 | Cycle or Circuit |  | A path which originate and ends in the same node | III |
| 69 | Eulerian Path |  | A path of a graph $G$ is called an Eulerian path, if it includes each of edges of G exactly once. | III |
| 70 | Eulerian Circuit |  | (i)Starting and ending points (vertices) are same. <br> (ii)Cycle should contain all the edges of the graph but exactly once. | III |
| 71 | Eulerian Graph |  | A graph containing an Eulerian circuit is called an Eulerian graph. | III |
| 72 | Hamiltonian Path |  | A path of graph G is called a Hamiltonian path, if it includes each vertex of $g$ exactly once. | III |
| 73 | Hamiltonian Circuit |  | Cycle should contain all the vertices of graph but exactly once, except the starting and ending vertices. | III |
| 74 | Hamiltonian Graph | UES | A graph containing an Hamiltonian circuit is called an Hamiltonian graph. | III |
| 75 | Connected Graph |  | An undirected graph is said to be connected if a path between every pair of distinct vertices of the graph. | III |
| Unit-IV Algebraic Systems |  |  |  |  |
| 76 | Semi Group |  | Closure property: $a * b \varepsilon G$, for all $a, b \varepsilon G$ Associative property: $(a * b) * c=a *(b *)$, for all $a, b, c \varepsilon G$ | IV |
| 77 | Monoid |  | Closure property: $a * b \varepsilon G$, for all $a, b \varepsilon G$ <br> Associative property: $(a * b) * c=a *(b * c), \text { for all } a, b, c \in G$ <br> Identity element: : $a * e=e * a=a$ for all $a \varepsilon G$ | IV |

| 78 | Semi group Homomorphism |  | Let $(S, *)$ and $(T, \Delta)$ be any two semi group. A mapping $g: S \rightarrow T$ such that for any two elements $a, b \in S . g\left(a^{*} b\right)=g(a) \Delta g(b)$ is called a semi group homomorphism. | IV |
| :---: | :---: | :---: | :---: | :---: |
| 79 | Group |  | Closure property: $a * b \varepsilon G$, for all $a, b \varepsilon G$ <br> Associative property: $\quad(a * b) * c=a *(b *$ <br> c), for all $a, b, c \in G$ <br> Identity element: : $a * e=e * a=$ a for all $a \varepsilon G$ <br> Inverse element: $a * a^{-1}=a^{-1} * a=$ <br> $e$ for all $a, a^{-1} \varepsilon G$ | IV |
| 80 | Abelian Group |  | Closure property: $a * b \varepsilon G$, for all $a, b \varepsilon G$ <br> Associative property: $(a * b) * c=a *(b * c), \text { for all } a, b, c \in G$ <br> Identity element: : $a * e=e * a=a$ for all $a \varepsilon G$ <br> Inverse element: $a * a^{-1}=a^{-1} * a=$ <br> $e$ for all $a, a^{-1} \varepsilon G$ <br> Commutative Property: $a * b=b *$ <br> $a$ for all $a, b \in G$. | IV |
| 81 | Order of group | $O(G)$ | The number of elements in a group G . | IV |
| 82 | Finite group |  | $O(G)$ is finite. | IV |
| 83 | Infinite group |  | $O(G)$ is infinite. | IV |
| 84 | Subgroup |  | Let ( $G, *$ ) be a group.Then $(H, *)$ is said to be subgroup of $(G, *)$ if $H \subseteq G$ and $(H, *)$ itself is a group under the operation *. | IV |
| 85 | Lagrange's theorem | D | If $G$ is a finite group and $H$ is a sub group of $G$ then the order of H is a divisor of order of G . The converse of Lagrange's theorem is false. | IV |
| 86 | Ring |  | (i) $\quad(a+b)+c=a+(b+c) \quad a, b, c \in R$ <br> (ii) $=$ There exists an element $0 \in \mathrm{R}$ called zero element such that $a+0=0+a=a$ for all $a$ $\epsilon \mathrm{R}$ <br> (iii) For all $a \in R, a+(-a)=(-a)+a=0$, $-a$ is the negative of a . <br> (iv) $\mathrm{a}+\mathrm{b}=\mathrm{b}+\mathrm{a}$ for all $\mathrm{a}, \mathrm{b} \in \mathrm{R}$ <br> (v) (a.b).c $=a .(b . c)$ for all $a, b, c \in R$ <br> The operation * is distributive over + i.e.,for any $a, b, c \in R$, $\begin{aligned} & \mathrm{a} \cdot(\mathrm{~b}+\mathrm{c})=\mathrm{a} \cdot \mathrm{~b}+\mathrm{a} \cdot \mathrm{c} \\ & (\mathrm{~b}+\mathrm{c}) \cdot \mathrm{a}=\mathrm{b} \cdot \mathrm{a}+\mathrm{c} \cdot \mathrm{a} \end{aligned}$ <br> In otherwords if R is an abelian group under addition with the properties (v) and (vi) then R is a ring. | IV |

| 87 | Field |  | A commutative ring $(\mathrm{R},+, \bullet)$ with identity is called a field if every non-zero element has a Multiplicative inverse. Thus ( $\mathrm{R},+, \bullet$ ) is a field if <br> (i) $(R,+)$ is abelian group and <br> (ii) $(\mathrm{R}-\{0\}, \bullet)$ is also abelian group. | IV |
| :---: | :---: | :---: | :---: | :---: |
| 88 | Cyclic Group |  | A group $\left\{\mathrm{G},{ }^{*}\right\}$ is said to be cyclic, if there exists an element $a \varepsilon G$ such that every element $x$ of $G$ can be expressed as $\mathrm{x}=\mathrm{a}^{\mathrm{n}}$ for some integer n . | IV |
| 89 | Kernal of a Homomorphism | $\operatorname{ker}(\mathrm{f})$ | If $f: G \rightarrow G$ is a group homomorphism ,then the set of elements of $G$, which are mapped into e', the identity element of G' is called the kernel of the homomorphism f . | IV |
| 90 | Left Co sets |  | If $\left\{H,{ }^{*}\right\}$ is subgroup of a group $\{G, *\}$, then the set aH where $a \varepsilon G$, defined by $\mathrm{aH}=\left\{\mathrm{a}^{*} \mathrm{~h} / \mathrm{h} \varepsilon H\right\}$ is called the left cosetof H in G. | IV |
| 91 | Right Co sets |  | If $\left\{H,{ }^{*}\right\}$ is subgroup of a group $\{G, *\}$, then the set Ha where $a \varepsilon G$, defined by $\mathrm{Ha}=\{\mathrm{h} * \mathrm{a} / \mathrm{h} \varepsilon H\}$ is called the right co set of H in G . | IV |
| 92 | Algebraic systems |  | A system consisting of non-empty set and one or more n -ary operations on the set is called an algebraic system. | IV |
| 93 | Homomorphism |  | If $\{X, \circ\}$ and $\{Y, *\}$ are two algebraic systems, where $\circ \& *$ are binary (n-ary) operations, then a mapping $g: X \rightarrow Y$ is called homomorphism or simply morphism from $\{X, \circ\}$ to $\{Y, *\}$,if for any $x_{1}, x_{2} \in X, g\left(x_{1} \circ x_{2}\right)=g\left(x_{1}\right) * g\left(x_{2}\right)$, If a function $g$ satisfying the above condition exists, then $\{Y, *\}$ is called the homomorphic image of $\{X, \circ\}$ | IV |
| 94 | Epimorphism |  | If the homomorphism $g: X \rightarrow Y$ is onto ,then g is called Epimorphism | IV |
| 95 | Monomorphism |  | If the homomorphism $g: X \rightarrow Y$ is one-to-one ,then g is called Epimorphism | IV |
| 96 | Isomorphism | DESIGN | If $g:\{X, \circ\} \rightarrow\{Y, *\}$ is one 0 to-one and onto, then g is called isomorphism | IV |
| 97 | Endomorphism |  | A homomorphism $g:\{X, \circ\} \rightarrow\{Y, *\}$ is called an endomorphism , if $Y \subseteq X$ | IV |
| 98 | Automorphism |  | A homomorphism $g:\{X, \circ\} \rightarrow\{Y, *\}$ is called an endomorphism, if $Y=X$ | IV |
| 99 | Sub Semi groups |  | If $\{S, *\}$ is a semi group and $T \subseteq S$ is closed under the operation $*$,then $\{T, *\}$ is called a subsemigroup of $\{S, *\}$ | IV |

| 100 | Sub Monoids |  | If $\{M, *, e\}$ is a monoid and $T \subseteq M$ is closed under the operation $*$ and $e \in T$,then $\{T, *, e\}$ is called a sub Monoid of $\{M, *, e\}$. | IV |
| :---: | :---: | :---: | :---: | :---: |
| Unit V : Lattices And Boolean Algebra |  |  |  |  |
| 101 | Reflexive |  | A relation R on a set A is said to be reflexive, if a R a for every $a \in A$. | V |
| 102 | Symmetric |  | A relation R on a set A is said to be symmetric, if whenever $a \mathrm{R} b$ then $b \mathrm{R}$ a. | V |
| 103 | Anti symmetric |  | A relation R on a set A is said to be anti symmetric, if whenever $(\mathrm{a}, \mathrm{b})$ and $(\mathrm{b}, \mathrm{a}) \in R$ then $\mathrm{a}=\mathrm{b}$. | V |
| 104 | Transitive |  | A relation R on a set A is said to be transitive, if whenever a R b and $\mathrm{b} R \mathrm{C}$ then a R c . | V |
| 105 | Partial ordering |  | A relation R on a set A is called a partial ordering if R is reflexive, anti symmetric and transitive. | V |
| 106 | Poset |  | A set A together with a partial order relation R is called partially ordered set or poset. | V |
| 107 | Hasse diagram |  | The pictorial representation of a poset is called Hasse diagram | V |
| 108 | Upper bound |  | When A is a subset of a poset $\{\mathrm{P}, \leq\}$ and if u is an element of P such that a $\leq \mathrm{u}$ for all elements $a \in A$, then $u$ is called an upper bound of A. | V |
| 109 | Lower bound |  | When A is a subset of a poset $\{\mathrm{P}, \leq\}$ and if $\\|$ is an element of P such that $\\| \leq \mathrm{a}$ for all elements $a \in A$, then 1 is called a lower bound of A. | V |
| 110 | LUB | 1) | The element $x$ is called the least upper bound of the subset A of a poset $\{\mathrm{P}, \leq\}$, if x is an upper bound that is less than every other upper bound of A. | V |
| 111 | GLB |  | The element y is called the greatest lower bound of the subset A of a poset $\{\mathrm{P}, \leq\}$, if y is an lower bound that is greater than every other lower bound of A . | V |
| 112 | Lattice |  | A partially ordered set $\{\mathrm{L}, \leq\}$ in which every pair of elements has a least upper bound and a greatest lower bound is called a lattice. | V |
| 113 | Sub lattice |  | A non empty subset M of a lattice $\{\mathrm{L}, \vee, \wedge\}$ is called a sub lattice of L , iff M is closed under both the operations $\wedge$ and $\vee$ | V |
| 114 | Idempotent |  | If $\{L, \leq\}$ is a lattice ,then for any $a, b, c \in L, a \vee a=a$ and $\mathrm{a} \wedge \mathrm{a}=\mathrm{a}$ | V |

| 115 | Commutative |  | If $\{L, \leq\}$ is a lattice ,then for any $a, b, c \in L, a \vee b=b \vee a$ and $a \wedge b=b \wedge a$ | V |
| :---: | :---: | :---: | :---: | :---: |
| 116 | Associative |  | If $\{\mathrm{L}, \leq\}$ is a lattice ,then for any $\mathrm{a}, \mathrm{b}, \mathrm{c} \in L$, $a \vee(b \vee c)=(a \vee b) \vee c$ and $a \wedge(b \wedge c)=(a \wedge b) \wedge c$ | V |
| 117 | Absorption |  | If $\{\mathrm{L}, \leq\}$ is a lattice ,then for any $\mathrm{a}, \mathrm{b}, \mathrm{c} \in L$, $\mathrm{a} \vee(\mathrm{a} \wedge \mathrm{b})=\mathrm{a}$ and $\mathrm{a} \wedge(\mathrm{a} \vee \mathrm{b})=\mathrm{a}$ | V |
| 118 | Lattice Homomorphism |  | If $\left\{\mathrm{L}_{1}, \vee, \wedge\right\}$ and $\left\{\mathrm{L}_{2},+, *\right\}$ are two lattices, is called a lattice homomorphism from $L_{1}$ to $L_{2}$, if for any $a, b \in L_{1}, f(a \vee b)=f(a)+f(b)$ and $f(a \wedge b)=f(a) * f(b)$ | V |
| 119 | Distributive lattice |  | A lattice $\{\mathrm{L}, \vee, \wedge\}$ is called distributive lattice, if for any elements $a, b, c \in L, a \wedge(b \vee c)=(a \wedge b) \vee(a \wedge c)$ $a \vee(b \wedge c)=(a \vee b) \wedge(a \vee c)$. | V |
| 120 | Complement |  | If $\{L, \vee, \wedge, 0,1\}$ is a bound lattice and $\mathrm{a} \in L$, then an element $\mathrm{b} \in L$ is called a complement of $\mathrm{a}, \mathrm{a} \vee \mathrm{b}=1$ and $\mathrm{a} \wedge \mathrm{b}=0$ | V |
| 121 | Boolean Algebra |  | A lattice which is complemented and distributive is called Boolean algebra. | V |
| 122 | Dominance Law |  | i) $\mathrm{a}+1=1$ and ii) a. $0=0$ | V |
| 123 | Demorgan's law |  | $(a+b)^{\prime}=a^{\prime} . b^{\prime}$ and $(a . b)^{\prime}=a^{\prime}+b^{\prime}$ | V |
| 124 | Double complement law |  | $\left(a^{\prime}\right)^{\prime}=a$ | V |
| 125 | Zero and one law |  | $0^{\prime}=1$ and $1^{\prime}=0$ | V |
|  |  |  |  |  |
| 126 | Prime Number |  | A prime number is a natural number greater than 1 that has no positive divisors other than 1 and itself. |  |
| 127 | Composite number |  | A composite number is a positive number that can be formed by multiplying two smallest positive integers. Equivalently, it is a positive integer that has at least one divisor other than 1 and itself. |  |
| 128 | Average |  | $\frac{\text { Sum of quantities }}{\text { Number of quantities }}$ |  |
| 129 | Ratio |  | A ratio is the comparison of two homogeneous quantities, or a ratio is the division of two quantities a and $b$ having the same units. It is denoted by $a: b$ |  |

| 130 | Arithmetic Progression | AP | Arithmetic progression(AP) or arithmetic sequence is a sequence of numbers in which each term after the first is obtained by adding a constant. |  |
| :---: | :---: | :---: | :---: | :---: |
| 131 | Geometric <br> Progression | GP | Geometric Progression of non-zero numbers in which the ratio of any term and its preceding term is always constant. |  |
| 132 | Probability |  | Probability is nothing but a chance that a given event will occur. The probability of getting success is 0.5 and failure is 0.5 .Total probability is 1 . |  |
| 133 | L.C.M |  | L.C.M. is the least non-zero number in common multiples of two or more numbers. |  |
| 134 | Methods of L.C.M |  | i) Factorization Method. <br> ii) Division Method. |  |
| 135 | H.C.F |  | The highest common factor of two or more numbers is the greatest number which divides each of them exactly without any remainder. |  |
| 136 | Reciprocal or Inverse Ratio |  | If the antecedent and consequent of a ratio interchange their places. The new ratio is called the inverse ratio of the first ratio. |  |
| 137 | Selling Price | SP | The price at which goods are sold is called the selling price. |  |
| 138 | Cost Price | CP | The price at which goods are bought is called the cost price |  |
| 139 | Market Value |  | The stock of different companies are sold and bought in the open market through brokers at stockexchanges. |  |
| 140 | Profit | Profit $=$ SP - CP | When the selling price is more than the cost price, then the trader makes a profit. |  |
| 141 | Loss | Loss $=\mathrm{CP}-\mathrm{SP}$ | When the selling price is less than the cost price, then the trader makes a loss. |  |
| 142 | Stock Capital |  | The total amount of money needed to run the company is called the stock capital |  |
| 143 | Shares or Stock | DESIGI | The whole capital is divided into small units, called shares or stock. |  |
| 144 | Simple Interest | $S I=\frac{P N R}{100}$ | P - Initial principal balance <br> N - Number of years <br> R - Interest rate |  |
| 145 | Compound Interest |  | Compound interest is calculated on the principal amount and also on the accumulated interest of previous periods, and can thus be regarded as "interest on interest". |  |
| 146 | Mean Price |  | The cost of a unit quantity of the mixture is called the mean price. |  |
| 147 | Odd one out |  | A person or thing that is different from or kept apart from others that form a group or set is called as odd one out |  |

| 148 | Speed |  | $\text { Speed }=\frac{\text { Distance }}{\text { Time }}$ |  |
| :---: | :---: | :---: | :---: | :---: |
| 149 | Time |  | $\text { Time }=\frac{\text { Distance }}{\text { Speed }}$ |  |
| 150 | Face Value |  | The value of a share or stock printed on the sharecertificate is called its Face Value or Nominal Value or Par Value |  |
| Faculty Prepared |  | Name of the Staff | Signature |  |
|  |  | Ms.S.Ranjitha |  |  |
